

An Intelligence-grade Zero Trust Solution with Unique Privacy and Security Capabilities

Enterprise-level cyber attacks continue to increase dramatically. Adversaries are targeting your network and becoming increasingly more sophisticated and persistent. Conceal can help you protect your network.

The Challenge

Anyone directly using the internet exposes their IP address, location, and network identity. Any external connection that your company has is a potential source of attack on your data and your systems and is easily located.

If you notice a breach, you've already lost the battle. Your adversaries have found your network; they know who you are and where you are.

The Conceal Solution

Conceal protects your identity and provides additional privacy and security for your communications on the internet. Our patented design **obscures and varies network pathways while protecting organization identities and systems** via virtualization across multiple cloud providers.

Conceal at-a-Glance

Disguise

Disguises your network communications' pathways.

Shift

Dynamically shifts your online activity without affecting ongoing communications.

Protect

Protects your subscriber information held in commercial provider's databases which exposes who you are.

Increase Security

Increases layers of security in your network transport to augment security protections of traditional commercial service providers.

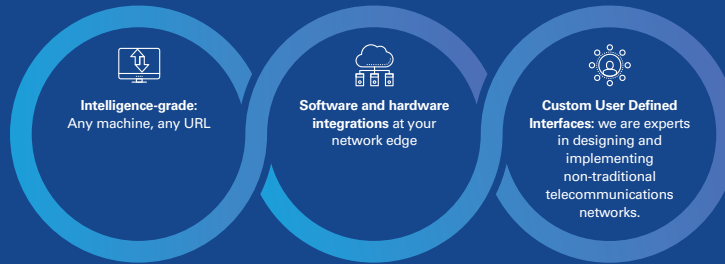

Leverage Agility

Boosts your network's agility and resiliency by quickly standing up and tearing down network communication pathways.

Disguise and protect your enterprise's online presence. [Visit conceal.io](https://conceal.io)

How Conceal Works

Conceal works on virtually any internet-enabled device and provides multiple options to connect:

We have implemented a shared service offering that provides basic network infrastructure that can be augmented to support customer-specific requirements. Conceal is a subscription network service and is only available to organization users, not private individuals.

“Set it and Forget it”

Conceal is simple to use and doesn’t require any specialized training or complicated steps to initiate internet access.
