

Cybersecurity Solutions for Financial Services

Conceal obscures and varies network pathways while protecting organization identities and systems via virtualization across multiple cloud providers.

The Challenge

Cyber attacks are in the news almost daily. While all organizations seek to prevent malware and control access to their data and internet communications, financial services firms are particularly vulnerable and often the focus of criminal elements. Are your networks fixed, static, easily located and thus more vulnerable to identification and attack?

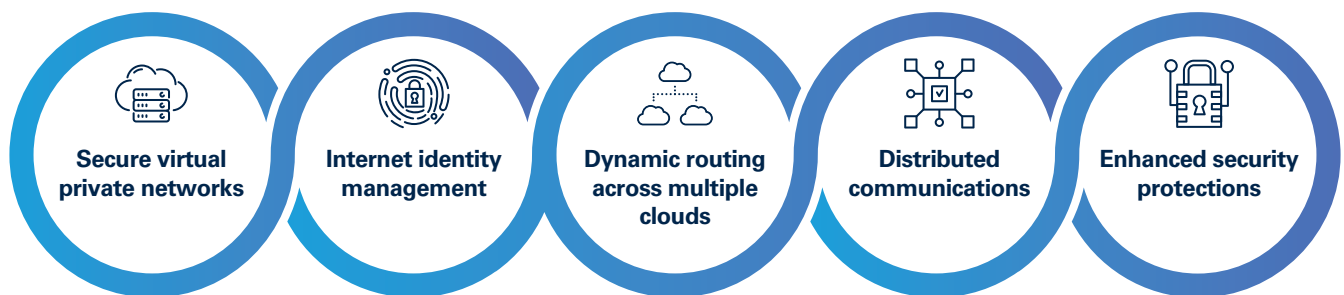

Are you finding that you struggle with security and privacy issues? You must protect your network, while improving performance and securing communications between the enterprise, the branch, the internet and the cloud.

The Solution

Conceal addresses the privacy and security needs of financial services organizations by offering additional security, privacy, performance and significant cost reductions. Entities that utilize Conceal products remain unidentifiable to criminal elements, prevent websites from filtering or denying content, enables discreet online surveillance and provides a reduced cyber-attack vector.

Conceal's unique network design lowers your cyber attack profile by isolating, obfuscating and dynamically shifting your communications pathways. With Conceal, your network communications are not attributed back to your organization.

Conceal disguises and protects your networks, communications, applications, and data with unique obfuscation solutions.

Disguise and protect your enterprise's online presence. [Visit conceal.io](https://conceal.io)

Conceal for Financial Services

Conceal provides **critical identity obfuscation for financial services organizations that need to protect customer data, financial transactions, investment research and branch communications**. Our solutions provide complete misattribution and privacy for personnel operating on the internet, leaving no identifiable footprint. Our suite of solutions not only help secure and protect network pathways but also obscure the existence of these pathways, reducing the possibility of attack when using the commercial cloud to provide application and data hosting services. **Conceal is a proven internet and cyber security solution for all types of financial services entities.**

Financial Services Use Cases

Secure Digital Transformation

Augment or replace your existing WAN connections to increase privacy and security between the enterprise, branch, datacenter, internet, and cloud.

Financial Crimes

Anti-Money Laundering (AML), Fraud, and Cyber Research, monitor and track financial transactions safely and without identity attribution. Analysts access the internet privately and with protection from browser and internet-born threats.

Data Governance & Compliance

Make intelligent routing decisions and take back control of your data to achieve GDPR compliance.

Executive Travel Protection

Employees can safely conduct business from any device while traveling, even in hostile foreign countries.

Crisis Communications & Business Continuity

Meet Federal Reserve requirements for sector critical systems to recover from a disruptive, corruptive or destructive cyber event.

Guest User Wi-Fi Protection

Shift risks to our network infrastructure and away from your assets when visitors use your network.

Identity Obfuscation

Protect customer data and investment research.
