

# Cybersecurity Solutions for Insurance

Our solutions increase online and network security, protect network pathways and reduce your cyber-attack vector.

## The Challenge

In recent years, the insurance industry has been a prime target for malicious cyber attacks. Ransomware, malware and other attacks are not new, but are becoming more sophisticated and targeted toward this industry due to its reliance to operate on web-based activities. These threats have caused insurance companies to pay millions of dollars to regain control of their systems once their networks have been infiltrated. Many insurance companies have insufficient network and outdated security software making them more vulnerable to these threat actors.

## The Solution

Insurance companies are trusted institutions that protect individuals and business against risk. Yet, they need to protect against their own risk due to the volumes of customer data, communications, intellectual property and content they handle while operating on the internet and across a network. Conceal's solutions obscure critical identity and address privacy and security needs by offering enhanced safety, confidentiality and performance at significant cost reductions.

Conceal's suite of solutions protect your digital footprint for your communications on the internet and in the cloud. Our patented design disguises and varies network pathways while protecting your identity and systems across multiple cloud providers.

**Conceal disguises and protects your networks, communications, applications, and data with unique obfuscation solutions.**

Disguise and protect your enterprise's online presence. [Visit conceal.io](https://conceal.io)

## Use Cases

ConcealBrowse provides ransomware protection to guard your users from malware, spear phishing and browser-based cyber threats with intelligence-grade, Zero Trust remote browser isolation. This enables users to communicate confidently and discreetly with other personnel, vendors, and third parties further protecting digital assets and sensitive client information.

ConcealSearch lets your security team be in control of their web-based activity and securely conduct discreet research, web-scraping, due diligence and online investigations. It gives you the power of browser policy controls to secure and protect online activity.

ConcealCloud secures sensitive data and host applications in a dedicated, zero-attack surface and Zero Trust environment in the cloud. It helps provide controlled access and non-traceable connectivity to protected environments within and across multiple public and private clouds. It offers next generation cybersecurity by leveraging existing, cost-effective, internet broadband connectivity to communication between the enterprise, the internet and the cloud while delivering increased performance, security and resiliency within the network.

## Multiple ways to connect to Conceal
