

ConcealBrowse for CIOs

See why Chief Information Officers invest in ConcealBrowse to monitor and manage risks at the edge.

THE CONCEAL VALUE FOR CIOs

As the Chief Information Officer, you are responsible for the management of the software, hardware, and systems necessary to run the business. Managing the entire environment requires you to also monitor your entire environment. As a result, you are tasked with the monitoring and management of assets, software, systems, etc. at the edge.

ConcealBrowse aids your responsibility on the web. By monitoring and defending all activity on your organization's browser(s), the necessary management of IT assets at the edge that are necessary to run the business are protected with little to no involvement from you and your team. Rather, you can focus on other monitoring and management efforts while being confident in your protection on the web.

Minimize Complexity and Your Workload

Allowing Conceal to manage security at the edge gives you the opportunity to focus on other aspects of your security strategy. Beyond management, we ensure seamless integration and scalability so that your expectations of your overall security strategy are mirrored by our strategy. We minimize unneeded complexity and costs so that our lightweight browser solution is simply that: lightweight.

Reduce Time to Defend

With automated monitoring and isolation, malicious activity is isolated before an alert needs to be generated for concerns on the web.

Insight on Key Data

The ConcealBrowse dashboard has been overhauled to give immediate insight to key metrics and to conduct a quick visual analysis of the data they are most interested in.

Enrich User Confidence

Employees' daily internet usage creates unavoidable risks to your company's cybersecurity posture. But your employees can't stop using the internet and must feel comfortable accessing it. ConcealBrowse can maximize user confidence in being cyber smart.

Compliance Requirements

Leverage Conceal to maximize your compliance with regulatory requirements. Ask us for mappings to different requirements from MITRE ATT&CK, FFIEC, NIST, to PCI and others to analyze your compliance against industry benchmarks and best practices.
