ConcealBrowse for CISOs

See why Chief Information Security Officers invest in ConcealBrowse to monitor and manage risks at the edge.

THE CONCEAL VALUE FOR CISOs

With the ever changing threat landscape, the job of the Chief Information Security Officer is continuing to grow in complexity as they try to create and manage an information security strategy that minimizes cybersecurity risk throughout the organization. Responsible for creating effective security and data governance practices for the organization, CISOs need to invest in solutions that enable the business while entering low-risk into business operations and allowing capabilities to scale.

ConcealBrowse minimizes complexity in your role as the Chief Information Security Officer by monitoring and managing risks at the edge to help manage your workload. We know the complexities that exist within a company's entire security strategy and by helping you manage security at the edge, you can focus on establishing and running a security strategy within the other aspects of your organization.

Minimize Complexity and Your Workload

Allowing Conceal to manage security at the edge gives you the opportunity to focus on other aspects of your security strategy. Beyond management, we ensure seamless integration and scalability so that your expectations of your overall security strategy are mirrored by our strategy. We minimize unneeded complexity and costs so that our lightweight browser solution is simply that: lightweight.
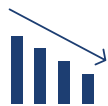

Seamless Integration & Scalability
Deployed in minutes and seamless to the user, Conceal protects your employees where it matters most, at the browser, stopping ransomware and credential theft.

Lower Cost
Reduce expenses on prevention, detection and response with the ConcealBrowse plugin that does not require compute costs of the cloud or a data center to provide security at the edge.

Risk Reduction
By preventing malicious activity on the web and minimizing exposure to your organization's network and assets, risk is reduced along with the organizations overall attack surface.

Unified Configuration
Minimize unneeded complexity of securing activity at the edge with ConcealBrowse by providing a solution that works for all browsers leveraged throughout the organization.
