

# Simplifying Cybersecurity: ConcealBrowse Meets NinjaOne

In today's digital-first world, ensuring robust cybersecurity measures is non-negotiable for businesses of all sizes. Recognizing this critical need, we're excited to introduce a streamlined solution that combines the comprehensive protection of ConcealBrowse with the unmatched efficiency of NinjaOne's Remote Monitoring and Management (RMM) capabilities.

## Effortless Deployment, Superior Protection

ConcealBrowse, known for its cutting-edge browser security solution, has teamed up with NinjaOne's RMM to offer an unparalleled security deployment experience. This partnership signifies a new era in cybersecurity management, where installing crucial protections is not only straightforward but seamlessly integrated into your existing IT infrastructure.

## For MSPs & MSSPs: A Tailored Approach

Managed Service Providers (MSPs) and Managed Security Service Providers (MSSPs) are in a unique position to benefit from this collaboration. With the ability to utilize tenant-specific MSIs, service providers can offer a personalized, yet hassle-free, deployment of ConcealBrowse to each of their clients. This bespoke approach ensures that every end-user receives the protection they need without complicating the installation process. For more details on this process, check out the [RMM documentation](#).

## Zero Interaction, Immediate Protection

One of the standout features of deploying ConcealBrowse via NinjaOne is the zero-interaction installation process. Once deployed to Windows endpoints using the ConcealBrowse MSI installer, the software immediately springs into action, protecting supported browsers from a myriad of web-based threats. This immediate activation means that businesses can rest assured knowing their online environments are secured without any manual intervention required from their teams or IT departments.

"We are very happy with the investment we made in NinjaOne. Deploying ConcealBrowse using NinjaOne was a smooth process. NinjaOne's efficiency in deploying solutions like ConcealBrowse reflects its effectiveness as a Remote Monitoring and Management (RMM) tool."

Steve Hyde, VP Information Technology  
Great Northern Corporation

## The Strategic Advantage

Choosing NinjaOne as the vehicle for ConcealBrowse installation isn't just about convenience; it's a strategic decision that enhances your cybersecurity posture with minimal effort. This integration enables businesses to:

- + **Streamline Operations:** By eliminating complex installation processes, companies can focus on their core activities while ensuring their cybersecurity measures are up-to-date.
- + **Enhance Security:** Immediate protection from web-based threats means that phishing, credential theft, and other suspicious internet content are blocked or isolated, keeping your data and online activities safe.
- + **Simplify Management:** For MSPs and MSSPs, the ability to manage deployments across multiple clients with tenant-specific MSIs offers a level of simplicity and control previously unattainable.

## Join the Movement

In the evolving cybersecurity landscape, staying ahead means choosing solutions that offer superior protection and integrate seamlessly into your operational framework. With the combined strengths of ConcealBrowse and NinjaOne, businesses have a solution that promises not just to protect but to revolutionize cybersecurity management.
